3.Tuya APP remote control

3.1 Download and install Tuya APP

1. Search and download "Tuya Smart" or "Smart Life" in the mobile app store.
2. Scan the QR code below to download the APP.

Image 3-1 Tuya Smart QR code

Image 3-2 Smart Life QR code

3.2 Account registration and login

1. Please click to register if you are using "Tuya Smart" or "Smart Life" APP for the first time.
2. If you have already registered an account, you can log in directly through your mobile phone number or authorize your login through your WeChat account or Apple ID .

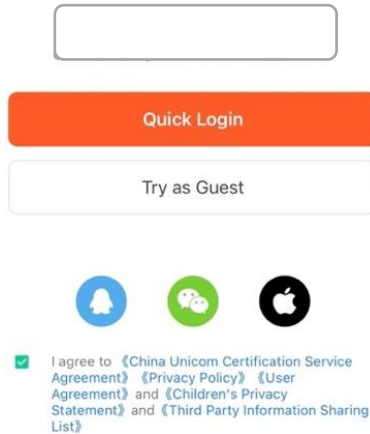

Image 3-3 Account registration and login

3. In order to ensure the normal use of APP functions, please allow and open all permissions of APP before use.

4. After logging in the APP, you can choose to create a family first and then add devices.

How to create a family: Click "My - Family Management - Create Family" in the lower right corner of the homepage, fill in the information and save it. The setter will automatically become the family owner and can set up administrators and ordinary members. When a family owner or administrator adds a device, family members will automatically add the device.

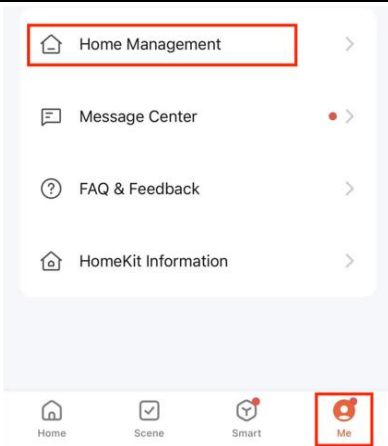

Image 3-4 family management

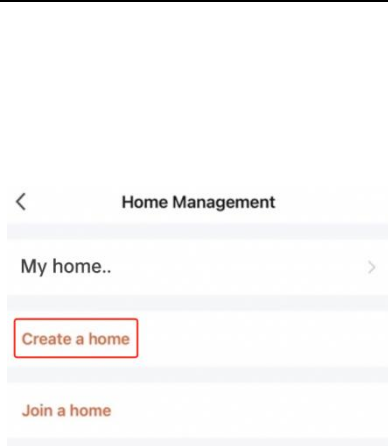

Image 3-5 create family

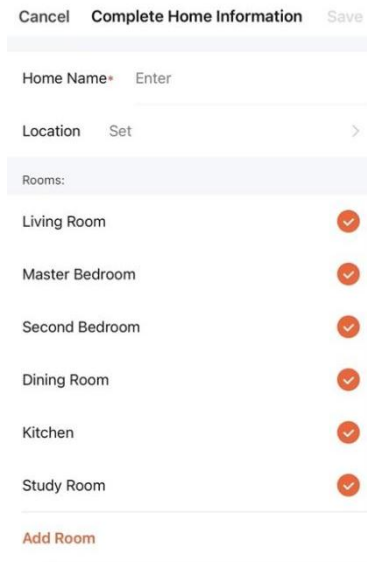

Image 3-6 complete home information

5. "Tuya Smart" or "Smart Life" is a large platform that can add multiple categories of smart products. Compared with the shared account, all family members who add this device have more unlocking functions; up to 20 administrators and family members can be added to a single family.
6. The video intercom is the device with a high security level. The device

must be removed from the original account before it can be bound to a new account.

3.3 Add Devices

1. The indoor monitor is connected to WiFi.

To configure the network for the indoor monitor, click [Settings] —[WLAN] on the main interface to enter the network configuration interface. It will prompt "WiFi connection successful", indicating that the indoor monitor is successfully connected to the Internet and the device QR code is displayed in the upper right corner.

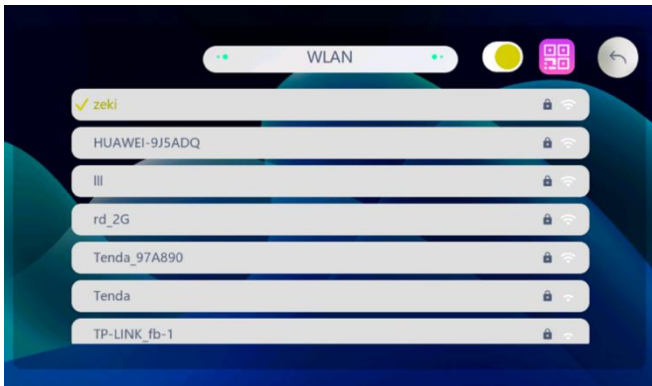

Image 3-7 connected to WiFi

Image 3-8 device QR code

2. Open the Tuya app and click [Add Device].

3. Click on the upper right corner to scan the QR code of the device in the indoor unit [WLAN] .
4. When the search is completed, click [Add].You need to wait for a while during the process of adding equipment.
5. The device name can be customized.
6. Click Add to complete and enter the monitoring interface.
7. The device appears in the device list.

The lock can be unlocked remotely and a record of the unlocking time can be generated.

Edit:

Manage interface function keys and home device shortcut keys.

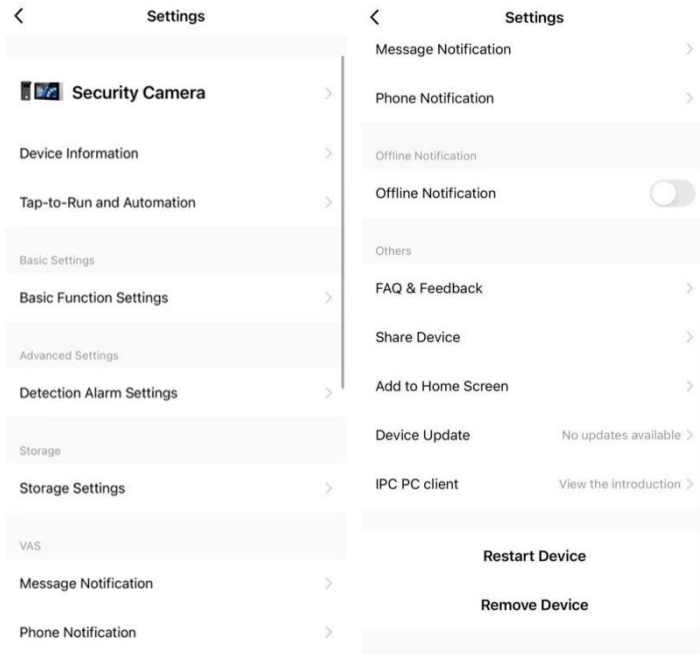

Image 3-16 security camera setting

1. Device: Modify the device name and location.
2. Device information: View IP address, device ID, signal strength and device time zone.
3. "One-click execution" and "automation": You can create intelligent scenes in "Scenes". After setting the "automation" scene, the device can

be automatically controlled for you, saving trouble and worry; after setting the "one-click execution" scene, in Manually click to control the device in the APP, which is fast and convenient.

4. Basic function settings: control the status indicator light switch of the door station, whether the screen is flipped, and add time watermark.

5. Detection alarm setting: Motion detection alarm switch, after turning it on, you can set the alarm sensitivity (low, medium, high); you can also set the alarm time period.

6.Storage settings: View the capacity, used capacity, and remaining capacity of the memory card; you can also format the memory card.

7. Value-added services: After activating the rights, you can add phone and text message notifications through APP scene automation or message center - alarm management. When your scene automation is successfully executed or an alarm occurs on the device, you will be notified via phone calls and text messages. Important No messages are missed, and your devices and home are protected in real time.

8. Offline reminder: The alarm message list will be pushed to the APP after the device is offline for more than 30 minutes (low-power devices will trigger a reminder after more than 8 hours).

9. Others:

Frequently Asked Questions and Feedback:

You can view some frequently asked questions to quickly provide help to users who are unfamiliar with the product or software operation.

Share device:

Enter the mobile phone number or email address of the user you want to share with, and click "Finish"; or enter the number of people

you want to share with and then select the sharing method to share; you can also directly copy the device information and share it with others. It should be noted that shared users cannot unlock. The unlocking user must be a family member. Members added in family management have full permissions on the menu.

Add to desktop:

You can add the device to the desktop.

Device upgrade:

Check the current software version; you can turn on the automatic upgrade function, and the device will automatically upgrade, but important function upgrades still need to be confirmed.

PC computer client:

View the introduction of IPC workstation. (Visit <https://protect.ismartlife.me> with Chrome browser on the computer, and use the mobile APP to scan the QR code to log in)

- 10. Restart the device: Restart the device.
- 11. Remove the device: After this account removes the device, other accounts or mobile phones can connect to the device.

3.5 Calling and remote unlocking

- 1. When a visitor presses the doorbell, it will be pushed online:

Image 3-17 pushed online

Click to answer or hang up. After answering, the real-time screen will be entered. Users can perform intercom, take photos, video, remotely unlock and other operations.

2. The mobile phone's standby status is pushed as follows:

Image 3-18 pushed as follows

Click on the push message to enter the real-time screen, and users can perform operations such as intercom, photo taking, video recording, and remote unlocking.

3.6 Help and Service

Tuya has many smart products, you can click [My] to enter service and

help.

1. "Voice third-party service", you can choose multiple intelligent voice control products, and each third-party product has detailed connection tutorials.
2. "Family Management" can create a new family or join a family and set permissions.
3. "Message Center" can view alarm information, family information and related notifications.
4. You can familiarize yourself with APP usage and device operation by viewing "Help and Feedback".
